Orland Park, IL 60462

Re: HORTON CENTER FAÇADE RENOVATION

The following is in response to your request for information on elevations.

OFFICE BUILDING ELEVATIONS

7. Side Elevations All side elevations will have similar top treatments and paint.

See drawings.

8. Façade Colorization Office and Retail will have same color scheme.

See attached color samples.

9. Field Color 1 Field color Casa Blanca SW7571

Trim color Meadowlark SW 7522

Metal roof color Terra Cotta Pac-Clad Petersen Aluminum

10. Lighting Light fixtures will be clad with same material as cornice with Terra

Cotta color. Light fixtures will be present on side elevations.

RETAIL BUILDING ELEVATIONS

11. Field Colors Casa Blanca is the field color. See sample.

12. Surface Mounted Opaque Glass The glass is black storefront spandrel panels.
13. Metal Roof Yes it is a new roof system across the front of the retail building.
14. Metal Roof Color The color of the metal roof is Terra Cotta. See sample.
15. Masonry Type and Color The type of brick is face brick painted to match Casa Blanca.
16. Column Scale The owner is concerned that if we increase the size of the columns more than the 50% we have already adjusted the columns, they may block the walkway. We may adjust the size as construction starts if columns appear to small. The columns are now 2 foot square.
17. Column Elements Adding additional material to the columns does not seem appropriate in this case.
18. "Wing" Column Elements We will clad the wing columns with the same brick but using a smaller scale.
19. Lighting Light fixtures will be custom made and will be clad with terra cotta. The lights will be back lite to light the face of the building and not produce any visual glare from the street.

If you have any questions please call,
