September 26, 2016

Mr. Medland,

Standard Equipment is pleased to provide the following Envirosight Quickview airHD price proposal for your review and consideration.

Proposed unit equipped with the following features and enhancements:

- Ability to view brilliant detail from inside sewers on a tablet display without a single cable connection. The Quickview airHD combines a high-sensitivity HD camera, powerful zoom optics (30X optical, 10X digital), and an enhanced Quad Haloptic light engine to deliver vivid footage over thin air.
- With Quickview airHD's wireless capabilities, not only can the operator view, record, annotate and share live HD video, they can also capture still images from live or recorded video, and control illumination, zoom, tilt and focus right from your fingertips. Additional users can connect to the camera in view-only mode to observe during the inspection. All this capability is available from within the Quickview app, which is available for Android, iOS tablets and Windows.
- New design allows to simply push down against the foot's gas spring until the view is centered in the pipe; a ratchet will hold your position. (If extended too far, design allows operator to push the foot to its lowest extent and the ratchet will release to the highest position, allowing operator to start over.)
- Motorized tilt capability on the Quickview airHD lets operator adjust camera angle over a 40-degree range using simple touchscreen controls. Once you aligned, an inclinometer in the camera head reads your absolute tilt so you can estimate pipe grade.
- Patented Haloptic technology offers more illumination farther into the pipe with optimum alignment at every distance. The new Quad Haloptic configuration uses four offset reflector/lamp pairs to fully encircle the camera with powerful light.
- From a 4-foot collapsed length, our new pole unfolds to 8 feet. Each half then telescopes an additional 4 feet for a total extended length of 16 feet. The pole attaches to the camera head with a quick-disconnect. Once positioned in the manhole, the pole is held stable at the top with a 6 ½' detachable arm, giving the unit 22 ½' of total reach.
- (2) lithium ion batteries with 120V charger are included
- Pressure regulator with 2 CO2 canisters are included.
