Exhibit E

UltiPro Launch Overview

Ultimate Software's UltiPro Launch methodology ("UltiPro Launch") provides proven and repeatable processes that enable project teams to measure progress and results and offers a solid knowledge transfer from Ultimate Software to the Customer. It is supported with standard tools, templates and proven training paths that deliver a successful launch of the UltiPro Software. Ultimate Software partners with the Customer throughout the UltiPro Launch process performing tasks such as a business requirements analysis through discovery workshops, system configuration, data conversion, interface development, testing cycles, production support, and project management.

With UltiPro Launch, Ultimate Software uses its proven methodology to provide training and services to deploy the UltiPro Software. UltiPro Launch will be delivered as described in this document.

1. Introduction to UltiPro Launch

Deployment Strategy

The deployment of a human capital management software solution is a collaborative endeavor that must be guided by strategic objectives. Ultimate Software's UltiPro Launch and deployment strategy is designed to reduce overall project complexity.

Ultimate Software will work with Customer to determine the most logical and efficient deployment plan of the UltiPro Software based upon Customer's current environment, products purchased, Customer's available resources and other driving factors. This best practice approach will be tailored to Customer's business objectives. In all deployments, UltiPro Core HR/Payroll will be deployed first and the project team members from Ultimate Software and Customer shall determine the deployment sequence for other areas of the UltiPro Software where applicable.

Deployment Lifecycle

The deployment lifecycle provides a road map that generally describes how the project will progress from the start to finish. The project team follows this roadmap to transition Customer's existing HCM functions from Customer's legacy provider to the UltiPro Software. Ultimate Software's deployment methodology includes the following phases:

Plan: Preliminary preparation involves four basic elements: Ultimate Software's internal readiness and team assignments, Customer preparation, a project team initial kick off meeting and software access.

Discover: This phase is designed to profile Customer's configuration through review of existing reports, analyze requirements to develop a solution design, and configure the solution.

Build: This phase is designed to configure Customer's UltiPro solution and migrate employee data into UltiPro from legacy system. This is inclusive of all UltiPro solutions intended to be deployed on your first live date. This phase will also provide unit testing to ensure that each iteration delivers a fully configured component of the system.

Test: This phase is designed to test the migrated employee data and provide comprehensive testing for all components that will be deployed on First Live Date.

Deploy: This phase is designed to finalize configuration and data in order to execute a First Live Date.

2. Roles and Responsibilities in the Deployment Life Cycle

3. Project Management Processes

Defining the scope is the process of reviewing all contract documents and confirming deliverables the project team will complete. The scope is defined during the discovery of Customer's business requirements in the planning phase.

Planning for resources is the process of assembling the project team. It is imperative that the proper resources with the right skills are available for specific tasks when needed. The resource plan is a combination of the roles and responsibilities detailed in the kick off presentation and the project schedule.

Developing the project schedule is the process of creating a list of tasks and placing them in sequence with due dates. The project schedule also includes identifying critical tasks and milestones so the project team knows where to focus their efforts and can track their progress. The project schedule is documented in the online *Project Console*.

Creating and maintaining an action log is the process of creating and maintaining a list of open action items that have been identified but not resolved (an "Action Log"). An Action Log is maintained during the project.

Facilitating status meetings is the process of scheduling and executing recurring team meetings to review the project schedule, Action Log, and project risks. The purpose of the meeting is to present an overall status to the team. This process does not include working sessions to address open items. Working sessions to resolve items will be scheduled outside of the status meetings.

Managing change is the process of identifying, approving, and authorizing new scope to the existing project once the product deployment schedule has been agreed to and documented.

Closing the project is the process of confirming that all project deliverables have been delivered and accepted by an authorized team member.

4. Training and Knowledge Transfer

Effective training and knowledge transfer are the keys to high user adoption rates. Not having Customer's team effectively trained can quickly erode any benefits received from the UltiPro Software. Training that results in self-sufficient administrators, managers, and employees increases the efficiency of the solution and Customer's business processes.

Ultimate Software's training model includes a role-based learning plan. Each role within Customer's organization has a specific set of courses required at specific points in UltiPro Launch. Having role-based training classes ensures Customer's team members are trained on the processes they will use in their day-to-day interactions with the system. The timing of this training is key. Ultimate Software aims to provide the training with as little time between training delivery date and system usage as possible. This provides for Customer's users to have an opportunity to reinforce the training through real-life application before they begin to lose the skills gained in training.

5. Project Team Composition

Resource allocation and commitment are key drivers for a successful UltiPro Launch. The project team is assembled using team members from Customer and Ultimate Software or an Ultimate Software Certified Partner (Ultimate Software trained and approved channel of consulting services resources). Ultimate Software uses employee resources and may use Certified Partners to assist in the performance of UltiPro Launch or consulting services under this Agreement. Customer hereby authorizes access by Ultimate Software and Certified Partners to the Customer information necessary to perform such services. This may include access to Customer's Confidential Information. All Certified Partners are subject to the confidentiality and
