Project Proposal

June 19, 2019

Mr. Ken Dado
Utility Operations Manager
Village of Orland Park
15655 S. Ravinia Avenue
Orland Park, IL 60462

Subject: SCADA Server Upgrades

Concentric Project Number: 190578.50

Dear Mr. Dado:

The Orland Park SCADA system has served the Village well for many years. However, just like automobiles, reliability typically decreases as SCADA systems age. Components wear out and maintenance costs (both in time and money) increase. Moreover, available technology improves with time and typically offers greater efficiencies that were not available at the time the original SCADA system was designed. Orland Park is experiencing both of these trends in the Village's SCADA system.

First, the existing SCADA server is over five years old and experiencing periodic hardware failures. As a result, Village staff have to periodically remove and reseat critical system components just to get the server operational again. This problem is urgent. To address it, Concentric proposes to replace the SCADA server with a virtualized server managed by Village IT staff.

At the same time as the server upgrade, Concentric proposes to upgrade the iFix SCADA software running on the server. The existing software is several versions out of date and it will save time and cost to upgrade this software as part of the server upgrade rather than doing it later.

Thirdly, there is a remote access server located at the Police Department which provides remote connectivity to SCADA. Concentric proposes to consolidate this server into the proposed SCADA server virtual infrastructure. This consolidation option is available due to advancements in virtualization technology and should result in reduced management effort for the servers.

Lastly, once the server architecture and software have been brought up to current standards, the Village will be able to pursue greater operational insights. In keeping with the Village's existing capital plans, Concentric proposes to install the planned SCADA Historian. Implementing the Historian as part of the SCADA server infrastructure improvements, Orland Park will realize some economies of scale, thus reducing the overall cost to the Village. The Historian provides the capability to efficiently collect and store enormous amounts of operational data from SCADA. By implementing the Historian, the Village will be establishing the foundation for further analytics of their operational data, which is likely to lead to operational efficiencies.

Project Approach

Concentric is proposing a refreshed design for the Village's SCADA architecture to facilitate the improvements mentioned above. Our proposed solution seeks to consolidate the Village SCADA architecture in a single virtual platform, enhance system resiliency, and improve network security and disaster recovery.

Consolidate Village SCADA Architecture

Consolidation of the SCADA Application Server, SCADA Remote Desktop Server, and (optional) SCADA Historian into a single Virtual host server should minimize the costs of hardware, software, licensing, and ongoing support. In the existing architecture, each SCADA server runs on its own dedicated hardware. With modern virtualization capabilities, the hardware footprint can be reduced by running all SCADA servers on a shared virtual infrastructure.

Enhance System Resiliency

By virtualizing the SCADA servers, Orland Park will enable the option to eventually implement SCADA server replication. Effectively this means two identical virtual SCADA servers could run in parallel. If the primary SCADA server failed, the parallel server could immediately take over until the primary was restored, resulting in zero downtime. The actual implementation of this replication is not included in this project, but this project establishes the foundation for that replication.

Improve Network Security and Disaster Recovery

Several infrastructure recommendations contained in this proposal are intended to improve the Village's SCADA network security and disaster recovery. These recommendations are informed by the Department of Homeland Security's current best practices.

One of the primary recommendations is to replace the existing Cisco ASA5505 firewall that protects the SCADA network. The firewall is currently nearing the end of its life. Concentric is recommending replacing this device with the FortiGate 60D with the Industrial Security Service (ISS) used to protect ICS / SCADA protocols. The ISS module understands and protects SCADA-specific traffic and will help to block unwanted, non-SCADA traffic from interfering with the Village's SCADA network.

During the course of this project, Concentric will also further enhance the separation of the SCADA servers from the administrative network by leveraging the new Fortinet firewall. We will review and adjust the firewall rules to isolate the SCADA network as much as possible while still permitting necessary functionality and accessibility from the administrative network.

Another key recommendation to improve disaster recovery is to implement an automated SCADA backup architecture. While Village staff currently performs backups periodically, it is a better practice to automate these backups. Doing so allows for more frequent restore points and reduces the potential of data loss in the event of a disaster. The Village currently uses VEEAM for cloud-based backups of other key IT hardware. Concentric would work with Village staff to leverage VEEAM to also perform SCADA-related backups. The VEEAM configured SCADA backups would allow for rapid restoration in the event of an emergency.

Below is the specific scope of services recommended to carry out the aforementioned objectives.

Labor

Project Management

1. Plan, schedule, and coordinate the activities that must be performed to complete the Project
2. Host kickoff meeting at Orland Park Public Works prior to start of work

SCADA Hardware Upgrade

1. Configure the Virtual Host server for the following virtual servers:
 - a. OPSC1 – SCADA Server
 - b. OPSCRDS1 – SCADA Remote Desktop Server
 - c. OPSCHIST1 – SCADA Historian
 - d. OPSCBI1 – Vantagepoint server
2. Configure new virtual SCADA Server (replacement SCADA Server) with iFIX 5.9 software application and WIN-911 Intermediate.
3. Configure new virtual Remote Desktop Server (replacement RDS Server) with iFIX 5.9 software.
4. Install one (1) Yeastar VoIP PBX to replace the existing dialogic card to enable alarm phone notification. The existing POTS line will be connected to the PBX and the WIN-911 software will communicate via a SIP call to place phone calls.

5. Install Microsoft Office on SCADA server and Remote Desktop Server.
6. Provide refreshed Visio-based network diagram at the conclusion of the project to the Village showing the resulting network architecture.
7. Replace existing thick client PC's with new Dell OptiPlex 7000 desktops.

SCADA Server Software Migration

1. Upgrade existing iFix application to iFix 5.9 (in a test environment) and then configure iFix 5.9 on three of the above virtual servers.
2. Provide licensing for iFix 6.0. We are installing version 5.9 because it has been proven stable, but the Village will own the licenses to version 6.0 if and when future upgrades are desired. When the time comes where version 6.0 has been proven stable, the cost to upgrade to it will be substantially lower because the Village already owns the proper licensing.
3. Develop into SCADA application indication and alarms notifying the connection status of both the fiber and Ubiquiti communication links between Public Works and the Main Pump Station.
4. Upgrade existing license of XLReporter to latest version. At the time of this writing, the latest version is 12. XLReporter will be installed on one of the thick client desktops.

Firewall Replacement

1. Program the Fortinet firewalls to provide the same level of access as the current Cisco 5505, migrating all firewall rules.
2. Review existing firewall configurations and revise firewall rules if necessary to meet best practices.
3. Activate Industrial Control Security Services to allow the firewall to identify and inspect SCADA-specific protocols.
4. Connect the two firewalls via the single mode fiber transceivers. Activate network monitoring for automatic failover between fiber network and wireless network paths.

(Optional) SCADA Historian and Business Intelligence (BI)

1. Provide, program, and configure Rockwell Historian SE and FactoryTalk Vantagepoint
 - a. 500 point Historian SE license

- b. Provide a three (3) named user Vantagepoint license to allow access to BI tools and trending. The three named users will be chosen by Orland Park at the kickoff meeting.
- c. Configure data model for historical information and trending.
 - a. Data model design will be a collaborative effort with Village staff. The data model design meeting will be scheduled at the kickoff meeting. Participants in the data model design meeting will be identified at the kickoff meeting as well.
 - b. Tags currently historized in iFix will be brought into the FactoryTalk Historian data model as part of this project. Prior data will be kept in iFix classic historian and will not be rolled into FactoryTalk Historian as part of this project.
- d. Provide two, 2-hour training classes onsite. One class is intended for basic user functions and use of the portal and historian tools. The other class is for "power users" to learn how to create/modify dashboards and trends.
- e. Dashboard creation capability will be established as part of this project. Dashboards themselves will not be created as part of this project, but could be created as part of future collaborations. With proper training, Village staff would also have the capability to create their own dashboards.

Concentric Assumptions / Owner Responsibilities

- 2. Owner will provide all required Antivirus Licensing for this project
- 3. Owner will provide and configure centralized backup solution for new SCADA environment

11. The Owner may, at any time, by written order, make changes within the general scope of this Agreement in the services to be performed by Concentric. If such changes cause an increase or decrease in Concentric's fee or time required for performance of any services under this Agreement, whether or not changed by any order, an equitable adjustment shall be made and this agreement shall be modified in writing accordingly. No service for which an additional compensation will be charged by Concentric shall be furnished without the written authorization of the Owner.
12. All Drawings, Custom Developed Applications, and other documents prepared or furnished by Concentric pursuant to this Agreement are instruments of service in respect to the project, and Concentric shall retain the right of reuse of said documents and electronic media by and at the discretion of Concentric whether or not the project is completed. Electronic copies of Concentric's documents for information and reference in connection with the use and occupancy of the project by the Owner and others shall be delivered to and become the property of the Owner; however, Concentric's documents are not intended or represented to be suitable for reuse by the Owner or others on additions or extensions of the project, or on any other project. Any such reuse without verification or adaptation by Concentric for the specific purpose intended will be at the Owner's sole risk and without liability or legal exposure to Concentric, and the Owner shall indemnify and hold harmless Concentric from all claims, damages, losses and expenses including attorneys' fees arising out of or resulting therefrom.
