

---

1. Rake, weed, and replenish shredded bark mulch in all existing planting beds. There should be a minimum of 3" to 4" of depth of mulch.
2. Trim out dead branches in existing trees and shrubs.
3. Add topsoil and seed in areas where settling has occurred at edges of curbs and sidewalks.
4. Take care in removing plant material from damaging structures or other plant material.
5. Provide fertilizer and weed control on all existing turf areas.
6. Edge all planting beds.
7. Locate and identify the locations of the existing irrigation system. Be sure to turn off and locate areas where the existing system will be cut off.
